

Test Plan for Manual QA Task with InfoTrack

1. Objective

To verify and evaluate the functionality, usability and accuracy of the Automation Practice Form for a desktop journey only.

2. Scope

Manual testing of form fields including validation, UI behavior, error handling, and successful submission.

3. Test Areas & Scenarios

3.1 Form Fields Validation

Fields: Name, Email, Gender, Mobile Number

Functionality

- Verify Name fields accept alphabetic characters and reject numbers/special characters.
- Verify Email field accepts valid formats and rejects invalid ones.
- Verify only one Gender option can be selected.
- Verify Mobile Number accepts only numeric input and enforces length limits.

Usability

- Clear field labels and placeholders.
- Logical tab order between fields.
- Error messages are visible, readable, and near the relevant field.

Accuracy

- Values match entered data.
- No data truncation or unintended formatting.

3.2 Date of Birth

Fields: Date Picker, Date Format

Functionality

- Verify date picker opens and allows date selection.
- Verify manual date entry follows required format.
- Verify invalid dates are rejected.

Usability

- Date picker is easy to navigate.
- Selected date is clearly displayed.

Accuracy

- Stored date matches selected date.
- Correct handling of leap years and boundary dates.

3.3 Subjects and Hobbies

Fields: Subjects Input, Hobbies Checkboxes

Functionality

- Verify Subjects input allows valid entries and suggestions (if applicable).
- Verify multiple hobbies can be selected.
- Verify selections can be changed or removed.

Usability

- Input is responsive and intuitive.
- Checkboxes are clearly labeled and clickable.

Accuracy

- Selected subjects and hobbies are correctly displayed on submission.

3.4 File Upload

Fields: Picture Upload, File Type Validation

Functionality

- Verify file upload accepts supported file types.
- Verify unsupported file types are rejected with an error message.
- Verify file can be replaced or removed.

Usability

- Upload instructions are clear.
- Feedback is shown after successful upload.

Accuracy

- Uploaded file matches selected file.
- No file corruption or incorrect preview.

3.5 Address Fields

Fields: Current Address, State, City

Functionality

- Verify Current Address accepts alphanumeric and special characters.
- Verify State dropdown populates correctly.
- Verify City dropdown updates based on selected State.

Usability

- Dropdowns are easy to navigate.
- Default values or placeholders are meaningful.

Accuracy

- Selected State and City are correctly recorded.
- Address text remains unchanged after submission.

3.6 Form Submission

Fields: Submit Button, Form Validation

Functionality

- Verify Submit button is enabled only when mandatory fields are completed.
- Verify form cannot be submitted with invalid or missing data.
- Verify successful submission displays confirmation.

Usability

- Validation errors are summarized or clearly highlighted.
- Submit button placement is intuitive.

Accuracy

- All submitted data matches user input.
- No unintended data loss or modification.

4. Entry & Exit Criteria

Entry: Webpage is accessible and form loads successfully.

Exit: All critical defects logged, validation behavior verified, and successful submission confirmed.
